Highly secure identification

- Fingerprints are one-of-a-kind and cannot be guessed, stolen, shared or re-created! If someone tries to re-create it, our unit rejects such fake (spoofed) fingerprints.

With our fingerprint reader with optical sensor inside, you can ensure your security and do so affordably with no extra payment for lost RFID cards, fobs, etc!

Innovative functional design

- Sophisticated functional and still very luxury design of the unit guarantee that users touch the optical sensor in very natural position without any need to swipe the finger several times.

The fingerprint is quickly matched and user has immediate acoustic and visual response provided by multicolor LEDs.

Absolutely accurate enrollment

- The accuracy of the enrollment process is absolutely essential for biometric technology. We are using industry leading sensor not only in Access Unit but also in external USB fingerprint reader that is used for enrollment process itself.

Every user selects two fingers he will use for identification. Both of them needs to be scanned three times during the initial enrollment process.

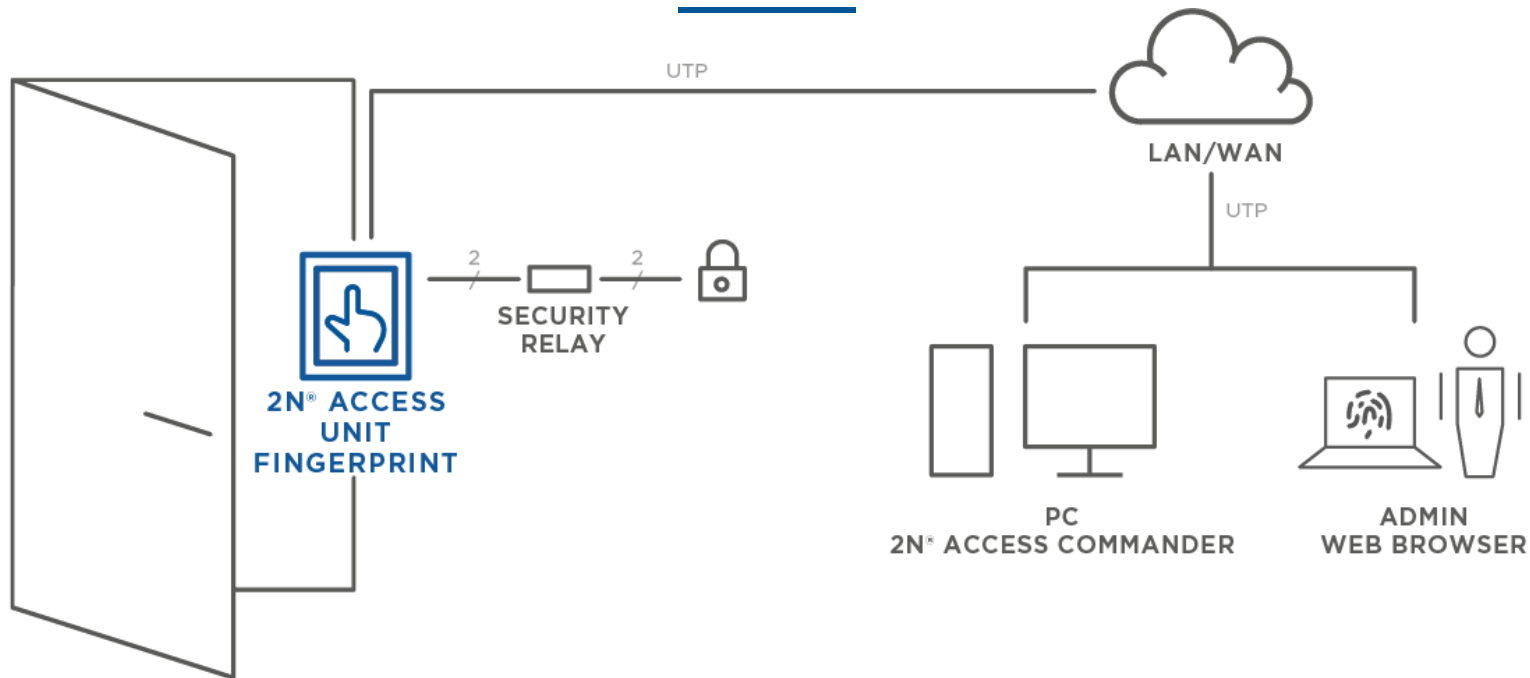

Weather resistant sensor

- Thanks to the mechanical properties of 2N fingerprint reader the unit can be installed inside the building as well as in the outdoor environment.

It perfectly works regardless of weather conditions – in the freezing weather, during the rain, in hot sunny days.

Technical Specifications

Interfaces

- **Power supply:** PoE (802.3af) and/or 12V $\pm 15\%$ / 2A DC
- **Passive switch:** dry and wet contact, up to 30V/1A AC/DC
- **Active output:** up to 12V DC and 550mA
- **Inputs:** passive / active mode (-30V to +30V DC)

Fingerprint reader

- **Used technology:** optical
- **Fast matching speed:** extraction takes 0.75sec
- Rejects fake (spoof) fingerprints
- **IP coverage:** IP54 (durable glass with touch surface)
- **Operating temperature range:** -20° to 55°C
- **FBI PIV and Mobile ID certification; FAP20**
