

# Cards & Tags

## Passive & active

CDVI Group Products

### Range : CDVI

A complete range of cards & tags from CDVI to compliment the reader technology chosen. From standard proximity to long-range and smart, our cards & tags offer flexibility for the management of the users.

The range includes:

- Proximity cards (passive)
- Proximity tags (passive)
- Long range cards (active)\*\*
- Smart cards (passive)
- Smart tags (passive)

\*\* the long range active cards include a battery which can be changed by the user, increasing the life of the card/tag. Also, models are available which incorporate a motion sensor - this prevents the devices from transmitting when stationary and preserves battery life, particularly useful for cars and assets. The active cards can have a proximity device installed within, creating a dual-technology card which is ideal for car parks and office use.

The proximity cards and tags are 125kHz. The tags are designed to be fixed to a keyring, while the ISO card is designed for use with printers to incorporate photo ID.

The smart card and tags works with the Mifare® technology, and are multi-use cards as they are able to share information on the card/tag for other user requirements (vending etc).
